Women, Alzheimer Disease and Caregiving

It's no surprise that women are more likely to develop Alzheimer's disease. It was previously attributed to the fact that women live longer than men. However, as scientists look into the increased risk of Alzheimer's in women they are discovering there may be other contributing factors to the disease beyond longevity. Our panel will focus on the recent research data surrounding Alzheimer Disease in Women. We will also focus on caregiving, women and the economic costs.

Panelists:

- * Jill Lesser, President of WomenAgainstAlzheimer's
- * Anitha Rao, CEO & Founder, Neurocern
- * Sheila Welsch, Assistant Vice President, Senior Consultant, Merrill Lynch
- * Kerry Peck, Managing Partner, Peck Ritchey
